

HYDRA-STONE™ Dye Stain is engineered for coloring concrete floors and surfaces without the frustration of acid stain or failure of waterborne stains and paints.

Designed to deeply penetrate concrete or polymer modified cementitious materials, HYDRA-STONE™ has many intended uses:

- Coloring polished concrete floors.
- Alternative to acid stain floors.
- Retouching acid stained floors.
- Recoloring of concrete floors colored with other stain, integral color and color hardeners.

HYDRA-STONE™ is available as a concentrated liquid which can be reduced for additional color options either using HYDRA-STONE™ Reducer (for a slower dry and deeper penetration) or acetone.

Also available as HYDRA-STONE™ Powder Pack (concentrated powdered version) for decreased shipping cost. Powder Packs are simply added to HYDRA-STONE™ Reducer (for a slower dry and deeper penetration, deal for polished concrete) or acetone (for a super fast dry time with less penetration).

Packaging:

HYDRA-STONE™ Dye Stain Liquid:

- 4 ounce sample bottles
- 1 quart bottles
- 1 gallon bottles
- 5 gallon pails
- 55 gallon drums

HYDRA-STONE™ Powder Packs:

- 1 gallon pack
- 5 gallon pack

Coverage:

- 4 ounce = 5 sq. ft. per coat
- 1 quart = 100 to 150 sq. ft. per coat
- 1 gallon = 400 to 600 sq. ft. per coat
- 5 gallon = 2000 to 3000 sq. ft. per coat
